Correct answers and cited evidence

One entailed query, three possible cited subsets

(a) The supplied context

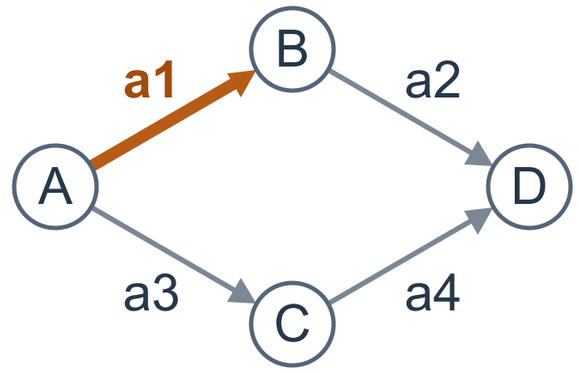

Query: A ⊑ D

Target: ENTAILED

Two complete routes connect A to D.

Each edge is a supplied axiom.

(b) Correct label, insufficient evidence

Query: A ⊑ D

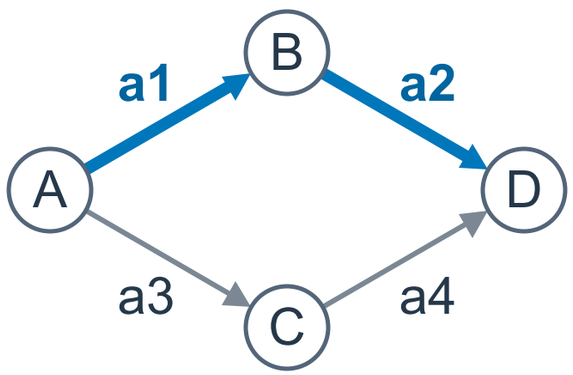

Answer: ENTAILED

Cites: {a1}

INSUFFICIENT

a1 alone does not entail the query.

(c) A sufficient cited subset

Query: A ⊑ D

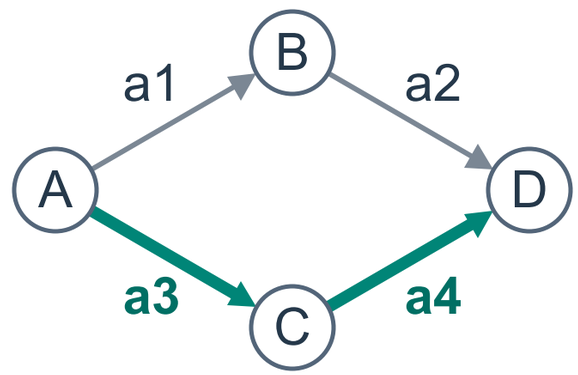

Answer: ENTAILED

Cites: {a1, a2}

VALID SUPPORT

Subset-minimal: both axioms needed.

(d) A different sufficient subset

Query: A ⊑ D

Answer: ENTAILED

Cites: {a3, a4}

VALID SUPPORT

Subset-minimal: a different route.

Panels (b)-(d): colored edges are cited; gray edges are present but not cited.
Schematic responses, not observed model outputs.
